She is always quick to help with whatever we need no matter what it is.

(①) My name is Susan and I work in the accounting department. I happened to hear that you are looking to promote someone within our company to the position of manager of the accounting department, and I felt a need to write you this letter. (②) I think Victoria Kimball, my department colleague, is an ideal candidate for the position, She is always on time, she never leaves early, and she does excellent work while she is here. It is obvious to both me and the rest of our colleagues that she has a natural talent for what she does. Her clients love her and so do we. (③) She is a fantastic employee and deserves the position. You would not regret choosing her. (④) As you are thinking about who might best fit into the position, I hope you will consider Victoria. (⑤)

As you know, any work loss because of a failure to hand over work is a serious problem.

(①) You took a month-long leave of absence; starting from November 20th, 2019 to December 20th, 2019. (②) As it was a monthlong leave, it was obviously a part of your duties to hand over your work to your team members (③) Hence, it was very disappointing to discover that you went on the leave without giving them any information about the projects that you were handling . In turn, your carelessness led to unfortunate delays in the projects. We are sure that you are aware that during one's absence from work, the company cannot afford to put any work on hold; (④) This letter is the final warning regarding your irresponsible behavior. Failure to fulfill your duties in the future will not be tolerated and will result in us taking more severe action. (⑤)

If possible, I would be honored to work on a long-term project in your lab.

(①) My name is David Lee and I'm a third-year chemistry major at Arizona State University. (②) While completing both my introductory and upper level coursework, I've developed a passion for science and am extremely interested in pursuing independent research as an undergraduate. Personally, I am especially interested in nanotechnology. Recently I read your 2017 papers on the potential applications of graphene, and became fascinated by your work. In particular, I found it amazing that graphene can be utilized to make flexible, transparent solar cells that can turn virtually any surface into a source of electrical power. (③) Would you be interested in including me as part of your research team?. (④) My resume is attached in case you are interested. I look forward to hearing from you. (⑤)

The wind hit with such force that I couldn't stand upright, and there was so much falling and blowing snow that I couldn't see much either.

(①) I was once out in the foothills of the Absaroka Mountains near my home in southern Montana when I saw a front of windy and snowy weather coming toward me. (②) Because of the open nature of that part of the upper Yellowstone River Valley, I was able to see the storm coming from a long distance away, but I was so far out on an exposed hillside that I wasn't able to make it to cover before the blizzard hit. (③) The slope where I was hiking was vegetated only with grass and sagebrush, so I started for a north-facing and timbered slope a mile or so away. Because the bare hillside was steep and already snow covered, the going was slow, so I didn't make it off the slippery slope before the blizzard hit. (④) All I could do for some period of time was to crouch down and wait. (⑤)

Also, I expected her to magically allow herself to be a part of a loving family.

About three months ago, my sister was having problems with her daughter, Amy, so my sister and I decided to have Amy move in with my family. We thought she could benefit from a change of environment. (①) Sadly, almost instantly, my relationship with Amy started to fall apart. (②) She tried to verbalize her need for limits and boundaries in the home and for time spent alone together. However, our conversations quickly spiraled out of control. Instead of remaining supportive of her when she would get excited, I minimized her feelings by telling her to grow up. I expected her to understand the cause of her fears. (③) It wasn't that simple for her, and I should not have reacted to Amy's emotions. She needed a safe space to calm down, but I didn't give her that and didn't listen to her better. (④) I should have respected her perspective and demonstrated that I was understanding of her fears. I should have allowed her to adjust to sharing space with my family. (⑤)

Or will you push yourself to perform like an all-star, the legendary player you know you can be, and dive for the ball?.

You are much more than just a list of your accomplishments. It's not only what you do, but how you do it that counts in the real scorebook of your life. (①) Making the spectacular diving catch says more about you than the "out" that is recorded in the scorebook. (②) It says you have game. It says you give 110%. Every performance in your life becomes a choice you have to make. Will you do just enough to get by, letting the ball drop in front of you for a base hit?. (③) Your special effort will be recorded in the minds and memories of the others. (④) More importantly, you will have the peace of mind and self-respect that come from knowing that you gave your very best — even if you don't end up making the catch. (⑤) That's the stuff of legends.

The surviving partner's friends thought his promise was foolish.

Irrational acts don't just sabotage us. (①) They can also make us heroes, lovers, and generous helpers. (②) The qualities we admire most in others are their emotional ones, not their intellectual ones. (③) Rarely does intellect alone inspire romantic acts or heroic deeds. The television mini-series Lonesome Dove was a big hit in the 1980s. Two rugged Texas Rangers shared a life together that eventually led them from Texas to Montana, where they made their fortune from a cattle drive. One partner died and the other promised to personally return the body to Texas; an incredible sacrifice. From rational point of view, the dead partner wouldn't know where he was buried; he was already dead. (④) They pressured him to ship the body to Texas by train. No rational argument would ever win this battle, and if it had, the movie would have lost its charm. (⑤)

That human nature is more created than discovered.

Ideas or theories about human nature have a unique place in the sciences. (①) We don't have to worry that the cosmos will be changed by our theories about the cosmos. (②) The planets really don't care what we think or how we theorize about them. But we do have to worry that human nature will be changed by our theories of human nature. Forty years ago, the distinguished anthropologist Clifford Geertz said that human beings are "unfinished animals". What he meant is that it is human nature to have a human nature that is very much the product of the society that surrounds us. (③) We "design" human nature, by designing the institutions within which people live. (④) So we must ask ourselves just what kind of a human nature we want to help design. (⑤)

Since I didn't need shoes, I found myself mindlessly looking at shoe trees, laces, and polish.

Near my old office building, the window of a shoe store advertised the generous offer of a free shoe shine. I walked by this store dozens of times and thought nothing of it. One day, though, with my shoes looking a little scuffed and some time on my hands, I decided to avail myself of this small bounty. (①) After my shine, I offered the shoeshine man a tip. He refused. (②) Free was free, he said. I climbed down from the chair feeling distinctly indebted. "How could this guy shine my shoes," I thought, "and expect nothing?". So I did what I suspect most people who take the offer do — I looked around for something to buy. I had to even the score, somehow. (③) Finally, I quietly walked out of the store empty-handed and uneasy. (④) Even though I had managed to escape from the store, I was sure many others were not so fortunate. (⑤)

From what I have seen in counseling, the besetting sin of the father as performance-focused parent in his misguided belief that dogged disapproval will cause his teenagers to try harder and do better.

(①) "I'll keep criticizing you until your attitude and motivation improve!". In fact, excessive criticism only hurts the teenager's feelings and discourages him or her from wanting to hear what the father has to say and from doing what the father wants him or her to do. (②) The paternal criticism is offensive, not appreciated. The teen wants less to do with him and for him, not more. (③) And the father contaminates his connection with his teenager by provoking his or her increased resentment and dislike. "Dad is never satisfied, no matter how I do, which is all he really cares about!". (④) As a performance coach, a father would be far better served by praising the good than by only faulting mistakes in the misguided belief that his expressions of dissatisfaction will cause improvement. (⑤)

These reactions help to make the police officer feel a part of the uniform and more comfortable with the role that goes with it.

When a young police officer puts on a uniform for the first time, it almost certainly feels strange and foreign. (①) yet other people react to that uniform in a range of more or less predictable ways — just as they do to a priest or to a white-coated doctor. (②) This is the point of uniforms: they help people think themselves into a particular way of behaving, and communicate clearly to other people what function that person is expected to perform. (③) Our dress and appearance are a sort of uniform as well, whether we like it or not. They are very powerful statements to other people about what to expect from us. (④) Equally, they are powerful statements to ourselves about what to expect of ourselves. (⑤) This, together with the way other people react to our appearance, powerfully shapes how we feel, think and behave.

The biggest problem the world now has is that we do not interact personally much anymore.

While individualism gives strength, it also can create a weakness if not moderated by involvement with others — family, friends, and society. (①) Pure individualism may lead to a philosophy of convenience and a lack of participation in or appreciation of the civic and social process. (②) This limits personal growth, mutes gaining leadership skills and traits, and deprives one of the true contexts of life that is the reality model of one's mind. (③) Our technology removes some of reality and replaces it with perception, relativity, and inherent self-interest often pushing us to convenience. (④) We look at the world as centered upon us and give ourselves undue influence on the reality of events. (⑤) We need to move into a position of not thinking the world rotates around us but how we fit into the world. This is the concept of context.

The prevalence of negative thinking, fuzzy and illogical thinking, and rigid thinking in our society proves that fact that these higher-level thinking skills do not come naturally.

By taking a conscious interest in your brain and how it works, and by consciously trying some of the techniques that follow, you can acquire a variety of useful mental skills. It isn't really very difficult, but it won't happen by accident. (①) A cross section of our society represents the "average" level of thinking skill — the level one might expect of a large number of people who have never thought very much about thinking. (②) To move beyond the level of average thinking, you must think about thinking. (③) You must pay attention to how your brain works, and you must experiment with new techniques. (④) Once you do that, you will clearly see the value of it.

But it's part of our research vocabulary, and it will continue to appear in reports.

The term statistical significance is an unfortunate choice of words. (①) It refers to the fact that the results discovered, or differences between two sets of data, could reliably be expected to occur again if another study was conducted in a similar manner. (②) But too many people hear the phrase "statistically significant" and assume it also suggests that the results are significantly important. (③) That may or may not be true. Instead, think of the term as suggesting that you would expect to find the same results 95 out of 100 times if a study is replicated in a similar manner or 90 out of 100 times, depending on what measure of reliability is used. (④) True significance lies in interpreting the data correctly to ensure that it has meaning or importance for the organization you represent. (⑤)

These places function, I think, whether we intend them to or not, as sacred groves — places we respect and leave alone, not because we understand well what goes on there, but because we do not.

(①) The survival of wilderness — of places that we do not change, where we allow the existence even of creatures we perceive as dangerous — is necessary. (②) Our sanity probably requires it. Whether we go to those places or not, we need to know that they exist. (③) And I would argue that we do not need just the great public wildernesses, but millions of small private or semiprivate ones. (④) Every farm should have one; wildernesses can occupy corners of factory grounds and city lots — places where nature is given a free hand, where no human work is done, where people go only as guests. (⑤)

Finding the best location for a piano also includes acoustical considerations; usually a piano sounds best in a room without thick wall-to-wall carpeting or heavy, sound-absorbing draperies.

Finding an ideal location for a piano is often difficult. (①) In the order of importance, the location should help preserve the instrument, be acoustically satisfactory, and be aesthetically pleasing. (②) Ideally, a piano should be placed on an inside wall, away from the direct rays of the sun. (③) Moreover, it should not be placed next to heaters, stoves, air conditioners, or near heat ducts or cold air returns. Drafty locations next to open windows or doors should also be avoided. (④) Instruments that are placed directly beneath water pipes or emergency sprinkler systems should be protected with a water proof cover from possible water damage. (⑤)

글의 흐름으로 보아, 주어진 문장이 들어가기에 가장 적절한 곳을 고르시오.

Power, considered by some theorists to be the “entrance requirement” for anger, is not necessary for sadness.

(①) Anger is an “approach” emotion, while sadness is a “retreat” emotion. Thinking of a person as sad makes us see them as weaker and more submissive. (②) Anger, not sadness, is associated with controlling one’s circumstances, such as competition, independence, and leadership. (③) Anger, not sadness, is linked to assertiveness, persistence, and aggressiveness. (④) Anger, not sadness, is a way to actively make change and confront challenges. Anger, not sadness, leads to perceptions of higher status and respect. (⑤) Like happy people, angry people are more optimistic, feeling that change is possible and that they can influence outcomes. Sad and fearful people tend toward pessimism, feeling powerless to make change.

But this is because we have bought into a belief system that teaches us that happiness is as scarce as hen's teeth.

Sadly enough, some of us have distorted lessons of happiness that developed in our childhood. (①) Our experiences developed as we grew up in different systems, such as our original family, our religious community, and our neighborhood. (②) Many of us believe that only a few of us experience true happiness. Most believe attaining true happiness is like winning the lottery, and only some of us are lucky enough to win it. (③) Or maybe some of us believe in "works of righteousness" — a theology that says if you work hard enough at anything, you will receive what you work for. (④) Any one of these theories of happiness is born of the philosophy that happiness is scarce. Looking around our world right now I would have to agree that true happiness is in short supply. (⑤)

What this "proves," if anything, is that computers are more rational than men; it also suggests that if there is a root cause of human conflict and of the power drive of nations, it lies not in hopes of economic development, historical forces, or the workings of the balance of power, but in the ordinary hopes and fears of the human mind

(①) The causes and consequences of war may have more to do with pathology than with politics, more to do with irrational pressures of pride and pain than with rational calculations of advantage and profit. (②) There is a Washington story, perhaps apocryphal, that the military intellectuals in the Pentagon conducted an experiment in which they fed data derived from the events of the summer of 1914 into a computer and that, after weighing and digesting the evidence, the machine assured its users that there was no danger of war. (③)

In addition, fewer people are likely to take entrepreneurial risks because aging workers tend to preserve the assets they need to retire comfortably rather than set up new businesses.

(①) Aging is an economic challenge because unless retirement ages are drastically increased so that older member of society can continue to contribute to the workforce (an economic imperative that has many economic benefits), the working-age population falls at the same time as the percentage of dependent elders increases. (②) As the population ages and there are fewer young adults, purchases of big-ticket items such as homes, furniture, cars and appliances decrease. (③) This is somewhat balanced by people retiring and drawing down their accumulated savings, which in total lowers savings and investment rates. (④)

Thus, Henry's efforts were in vain.

During the 1890s Richard Henry was caretaker of Resolution Island in remote Fiordland on the west coast of New Zealand's South Island. (①) A keen naturalist, he noted with concern the impact on native birds of the arrival of recently introduced stoats as they invaded this last corner of New Zealand. (②) In a desperate attempt to protect populations of the flightless kakapo and little spotted kiwi between 1894 and 1900 he translocated hundreds of individuals from the mainland on to Resolution Island. (③) Unfortunately, Resolution was too close to the mainland and stoats invaded in 1900. (④) Nevertheless, the technique of isolating species in danger on predator-free islands that may or may not have been occupied by the species in the past became a vital tool to prevent extinctions from predation by introduced predators in New Zealand. (⑤)

Seredy illustrated two children's books in Hungary before moving to the United States in 1922.

Kate Seredy was born in 1899, in Budapest, Hungary. Her father, a teacher, helped her develop an appreciation for books. After high school she earned an art teacher's diploma from the Academy of Arts in Budapest and also spent time studying in Italy, France, and Germany. (①) She served as a nurse for two years during World War I, and the pacifist stance she subsequently developed later influenced her writing. (②) She supported herself in her new homeland by illustrating lamp shades and greeting cards. (③) As her knowledge of English increase, she found work illustrating textbooks and children's trade books. (④) Seredy wrote her first book, The Good Master, after an editor suggested she try writing about her childhood in Hungary. (⑤) Seredy won the Newbery Medal in 1938 for The White Stag, a book based on legends about the founding of Hungary that her father told her as a child.

The machine increased productivity as much as fourteen times over hand methods and led to concentration in the industry.

On March 20, 1883, Jan Matzeliger (1852-1889) patented the first successful shoe-lasting machine. (①) Matzeliger was born in Surinam of a Dutch father who was an engineer and a black mother who was Surinamese and probably came from West Africa. (②) He left Surinam in 1871 and became a sailor on an East Indian ship. Matzeliger settled in Philadelphia for a while, holding odd jobs until he moved to Boston in 1876. (③) The next year he settled in nearby Lynn, Massachusetts. There he developed his device while working in a shoe factory. (④) Matzeliger continued to work on the machine to improve its quality, and received a patent for a third and improved model on March 20, 1883. (⑤) He invented a number of other devices, including a mechanism for distributing tacks and nails.

At the time, Mother Teresa had no idea of the global impact that this decision would have on the world.

Thomas Edison failed ten thousand times until, like a bolt of lightning, the solution to the challenge of the incandescent light bulb hit him, and because of this, he transformed the world. (①) Rosa Parks had no idea that choosing to resist her conditioning — the injustice of racial prejudicing — and risking imprisonment, beating, or even worse, would spark a revolution that would transform history for all men and women, regardless of race. When Mother (②) Teresa chose to leave her position educating the privileged classes of India in order to care for the poor and forgotten, people thought that she was crazy. (③) Albert Einstein received the solution to his Theory of Relativity while dreaming that he was riding on a beam of light. (④) So, too, will you receive your aha moments of brilliance, unexpectedly and through no effort of your own. (⑤)

Consequently, from the start country music was an eclectic mix, which included ancient British ballads, Americanized versions of these, sacred songs, minstrel tunes, early blues, and songs of many sorts absorbed from the commercial popular music industry over the years.

(①) The major themes of country music are work, freedom, and alienation, appearing in approximately one-sixth of all Top 20 selections. (②) Country music is itself a commercial offshoot of the traditional song and instrumental music of the South, formerly carried on in an oral tradition. (③) Over the 20th century it has grown from a homegrown and heartfelt music, expressing working-class identity, whether or not its listeners are actually working class. (④) The symbolic meaning of country music as the declared favorite music of New England-educated, upper-class President George Bush — presenting him as a "regular American" — is unmistakable. (⑤)

The truth is, most of us are unconscious about how we truly spend our time, prioritizing things that we say don't really matter to us.

We must understand that busyness does not necessarily equal productivity, and in order to accomplish anything in life, we must prioritize. (①) What we put at the top of our list determines how we spend our time and how much value we get out of each and every day. (②) We waste our extra time watching TV, complaining, or sleeping our lives away. (③) We mindlessly scroll through social media and spend hours talking on the phone, and we don't make good use of our time traveling to and from work. (④) We do so much in a day, yet wonder where all of our time went. Once we get honest about how we're actually spending our days, we can begin to prioritize what's most important to us, and start taking back our time. (⑤)

The key significance for invention is that the so-called genius develops ideas that no one has had previously and, in the words of Immanuel Kant, that 'genius must be considered the very opposite of a spirit of imitation'. In addition, Kant established that genius 'cannot indicate scientifically how it brings about its product, but rather gives the rule as nature.

(①) The term genius can be traced back to the Latin word ingenium: a natural-born talent. The essence of this talent is seen as original productivity, which employs confident intuition to access new areas of creativity. (②) The person who has genius — a brilliant creative power — is also known as a genius. (③) It was not until the Renaissance that people began to describe an artistic creative potential or the source of inspiration as genius. (④) Hence, where an author owes a product to his genius, he does not himself know how he conceived the ideas, nor is it in his power to invent the like at pleasure, or methodically, and communicate the same to others in such precepts as would put them in a position to produce similar products. (⑤)

Yet time after time we find ourselves, after attempts to diet, with ever more weight to lose.

The way our society views weight and getting into shape is one example of where expectations are often out of touch with reality, and leads to impatience — one of the top reasons why over 95 percent of all diets fail. (①) We are led to believe through various media that dropping pounds is something that can be done quickly and effectively if we just try hard enough. (②) The reality show The Biggest Loser, where contestants drop ten or even twenty pounds in one week, implies that rapid results are not only possible but commonplace. (③) We search for the latest fads and are drawn to products claiming to trim our waistline in thirty days or less. (④) While there are many factors that go into weight loss and healthy living, one of the hardest things for people to accept is that any real lifestyle change takes time: time to break bad habits and time to form new healthy ones. (⑤)

That statement is then recorded.

Recent psychological research has revealed that college students who look at a two-second video clip of a professor teaching can predict how students who spend an entire semester with that professor will like that professor by the end of the semester. In other words, a student watching a two-second clip of a professor says, "I like him". Or, "I don't like him". (①) At the end of the semester, students who have taken a class with the professor anonymously record whether or not they liked the professor. (②) With incredible accuracy, those watching the two-second clip predict what the entire class will feel at the end of the semester. (③) It sounds unbelievable, but it is true. (④) One of the big mistakes we make is making a poor impression on others. (⑤)

In his classic book, Groupthink, Janis explained how panels of experts made enormous mistakes.

(①) Yale psychologist Irving Janis showed that just about every group develops an agreed-upon view of things — a consensus reality, the "PC" or politically correct view. (②) Any evidence to the contrary is automatically rejected without consideration, often ridiculed, and may lead to exclusion of the person presenting the un-PC data. So group members are careful not to rock the boat by disagreeing with the consensus — doing so can seriously damage their standing. (③) People on the panels, he said, worry about their personal relevance and effectiveness, and feel that if they deviate too far from the consensus, they will not be taken seriously. (④) People compete for stature, and the ideas often just tag along. Groupthink causes groups to get locked into their course of action, unable to explore alternatives, because no one questions the established course. (⑤) The more cohesive the group, the greater the urge of the group members to avoid creating any discord.

Because to really make a decent sound, the air temperature must be at least 54°F.

The temperature of 54°F appears to be a magic threshold for several species. For example, at the height of summer, billowing meadows full of grasses and herbs are the habitat for grasshoppers and crickets, which provide an orchestral backdrop with their chirping. (①) However, this soundscape is by no means constant. (②) If it is cooler, you'll barely hear a squeak from these tiny musicians. (③) As cold-blooded creatures, grasshoppers can't regulate their own body temperature, and only really get going when it's warm enough. (④) Their body movements become faster with rising temperatures, resulting in ever more rapid vibrations of the legs and wings, which produce the chirping sound, depending on the type. (⑤) This also changes the frequency of the tone produced: the warmer it is, the higher the pitch.

Now, as a matter of fact, some things can be quantified and some things cannot.

Unfortunately, there are some social scientists who refuse to admit the limitations of their field of study. (①) They push hard to make social science imitate physical science. (②) This is usually done by the use of all sorts of numbers, tables, charts, and graphs in order to give the impression of a profound quantification of the subject matter. (③) We cannot really quantify prejudice or love, for instance. (④) When all is said and done, such attempted quantification is in vain. What is often forgotten, even in the physical sciences, is that science is not primarily a matter of quantification. (⑤) The use of mathematical techniques is not an end in itself but only a means to an end, namely, the discovery of what's true about the material world. The use of numbers is one way to be more precise in our effort to rationally understand causes.

These commonsense beliefs are not universal, but are instead typically bounded by time as well as by space.

Culture consists of the linked stock of ideas that define a set of commonsense beliefs about what is right, what is natural, what works. (①) Today's orthodoxy may be the heterodoxy of yesterday and tomorrow. (②) Although cultural change is not usually perceptible from day to day, when we look over a longer time span it becomes apparent that even the most fundamental assumptions about morality and the standards by which quality of life should be evaluated are subject to change. (③) In his 1972 paper, Anthony Downs offers a vivid illustration of the extent of cultural change with his observation that "One hundred years ago, white Americans were eliminating whole Indian tribes without a blink. (④) Today, many serious-minded citizens seek to make important issues out of the potential disappearance of the whooping crane, the timber wolf, and other exotic creatures". (⑤)

Yet it seems likely that all humans can learn to sing minimally, to beat rhythms accurately, and to recognize simple pieces.

There is the question of the innate musicality of humans. (①) We know that all normal humans inherit the ability to learn language — it is somehow "hardwired" in the human brain — but whether the same is true of music, whether all humans are basically musical is not clear, in part because cultures differ so much in their conception of "singing". (②) Not all can attain professional proficiency; but then, although all humans can learn to speak, not all can become great orators. (③) The world's societies differ in the degree to which they encourage individuals to participate in music. (④) In some rural societies, most people are considered about equally good at singing, and everyone participates in music-making at public events. (⑤) In many urban societies, musical participation is largely limited to listening to live music and even more to recordings, whereas performance is left to professionals.

In the case of Athens and Sparta, it was the actions of smaller allies that drew them closer to war.

Graham Allison intriguingly laid out his ideas about the Thucydides Trap, tensions between an established power and a rising one, in an essay for The Atlantic. (①) As part of the Thucydides Trap Project, a team under Allison's direction examined sixteen cases where a rising power challenged an established one and determined the outcome of such challenges. (②) The results are disturbing. (③) Fourteen out of sixteen cases resulted in war. The worrying factor, according to Allison, is the fact that normal events or 'standard crises' that can otherwise be resolved, nevertheless trigger war. (④) This can easily happen in East Asia. Both Taiwan and Japan have the potential to draw the US closer to war with China. (⑤) Arguably, the US's allies might play a bigger role in the Thucydides Trap than fear of a rising power. This results in a situation where a great deal of effort is required to escape the Thucydides Trap.

As burial practices became more sophisticated, with the construction of elaborate tombs and monuments to the dead, the bodies of the deceased were no longer buried in the desert sand.

Mummification in Ancient Egypt was developed in response to a gradual change in the burial preferences of its deceased. (①) The artificial preservation of bodies, both human and animal, was practised in Egypt from about 2686 BC until the beginning of the Christian era. (②) The earliest Egyptians were buried in the sand, typically in the foetal position to reduce the size of the hole that would need to be dug, and the hot, dry climate would dehydrate the body. (③) The physical features of the body would be retained, and this lifelike appearance of the corpse may have supported the belief of an afterlife. (④) However, as belief in the afterlife and rebirth was fundamental to Egyptian burial practices, mummification was developed to artificially preserve the body in readiness for the journey to the underworld and to be judged by Osiris. (⑤)

He frequently threatened to resign.

The Prussian king, Wilhelm I, was a conventional man, and not particularly clever or insightful — in other words, the opposite of his minister, Bismarck. He disliked much of what Bismarck did and how he did it. (①) Yet at some level, the king recognized that he and his dynasty needed Bismarck even though, as Wilhelm once mildly complained, "It's hard to be Kaiser under him". (②) Since the monarch had the final say over foreign and defence policy, and governments answered only to him, and not the other way around, Bismarck only in the name of Wilhelm was able to exert great control over domestic and foreign affairs. (③) The two men's relationship was marked by terrible arguments. Bismarck would come down with severe headaches and fits of vomiting and claim that he was dying. (④) In the end it was always Wilhelm who backed down saying, "Bismarck mustn't think of resigning". Wilhelm wrote to him after one scene: "It is my greatest happiness to live with you and thoroughly agree with you!". (⑤)

You may have noticed that people differ in the schemas they tend to use when evaluating others.

(①) College professors are often concerned with whether someone is smart, sales managers with whether someone is persuasive, and those involved in the entertainment business with whether someone has charisma. (②) As these examples illustrate, the role of the evaluator or the context in which a target person is encountered often influences which traits or schemas are used. (③) But sometimes the schema is simply determined by habit: if a person uses a particular schema frequently, it may become chronically accessible and therefore likely to be used still more frequently in the future. (④) A frequently activated schema functions much like a recently activated one: its heightened accessibility increases the likelihood that it will be applied to understanding a new stimulus. (⑤)

This very point was elaborated by William McDougall in a book published in 1908, in which he developed his case for the existence of a gregarious instinct in humans.

Not everyone comes to see the game. (①) For some, the contest merely provides the setting and opportunities for the expression of other motives. The social contact provided by the crowd itself suggests a reason for people to attend. (②) The question he posed at the turn of the century certainly argues convincingly for the view that we are social creatures. (③) However, additionally labeling the observed behavior as an "instinct" creates a tautology that adds nothing to our understanding. (④) McDougall asks his readers, "What proportion of the ten thousand witnesses of a football match would stand for an hour or more in the wind and rain, if each man were isolated from the rest of the crowd and saw only the players?". (⑤) We would guess very few in 1908, fewer today.

According to Greek mythology, the Oracle at Delphi was consulted to gauge the risk of waging a war.

(①) In modern times, the term Delphi refers to a group survey technique for combining the opinions of several people to develop a collective judgment. (②) The technique comprises a series of structured questions and feedback reports. Each respondent is given a series of questions (e.g, what are the five most significant risks in this project?), to which he writes his opinions and reasons. (③) The opinions of everyone surveyed are summarized in a report and returned to the respondents, who then have the opportunity to modify their opinions. (④) Because the written responses are kept anonymous, no one feels pressured to conform to anyone else’s opinion. If people change their opinions, they must explain the reasons why; if they don’t, they must also explain why. (⑤) The process continues until the group reaches a collective opinion. Studies have proven the technique to be an effective way of reaching consensus.

My Tougaloo College students readily understood that social structure pushed people around.

What is the basic idea of sociology?. It is this: Social structure pushes people around, influences their careers, and even affects how they think. (①) Not one of their parents was an architect, for example, because no school in the Deep South in their parents’ generation both taught architecture and admitted African Americans. (②) So my Tougaloo students knew how social structure might influence careers. (③) Then, too, neighbors of theirs — white children — had been their friends when they were four and five years old, but by the time they were fourteen and fifteen a barrier had gone up between them. (④) My black undergraduates could see that this racial bias was hardly innate; rather, it showed that social structure affects how people think. (⑤) Hence they were open to the sociological perspective.

According to the scholars of the Indian traditions (Vedas), the origin of religion was to be sought in the impressions that natural phenomena made upon man.

(①) The mythological figures were thought to be personifications of natural objects. The impressive manifestations of nature stimulated the personifying fantasy of man. (②) The primary stage of religion was not due to the religious nature of man, or to the 'need of the human heart', as O. Müller expressed it in his book, but to man's elementary capability of seeing personal figures in the impersonal phenomena of his surroundings. (③) What finally led to the formation of religion was, thus, the elaboration of a nature mythology, and the veneration of the respective figures. (④) The beginning of religion was the worship of many natural objects, with a predominance of such phenomena as the sun, the sky, thunderstorms, lightning, rain, and fire.

It is time for the public to reclaim the responsibility of producing quality media from the corporate conglomerates.

A well-functioning democracy requires a media system that provides diverse sources of information and encourages civic participation. (①) The government once considered the airwaves such an integral part of our democracy that politicians decided the public should own and control them. (②) The first step is to break up the concentration of media power. Let's give control to a greater number of smaller companies that could legitimately compete with a broader range of information. (③) Also, we must create and maintain a noncommercial public media system as well as independent alternative media that exist outside the control of transnational corporations and advertisers. (④) The rise of independent political blogs, and that of alternative podcasts, radio networks and television channels are all examples of citizens rising up to take back control of our media.

Unfortunately, the lessons learned from failures are too often forgotten in the course of the renewed period of success that takes place in the context of technological advance.

The cyclical nature of success and failure has been well established in the field of modern bridge design and engineering, in which experience spans about two centuries. (①) This masks the underlying fact that the design process now is fundamentally the same as the design process thirty, three hundred, even three thousand years ago. (②) The creative and inherently human process of design, upon which all technological development depends, is in effect timeless. (③) What this means, in part, is that the same cognitive mistakes that were made three thousand, three hundred, or thirty years ago can be made again today, and can be expected to be made indefinitely into the future. (④) Failures are part of the technological condition.

Both would be considered reshoring more precisely, reshoring back to the US.

The popular press deems reshoring to be "bringing manufacturing back home,,," from a current location that is not home. (①) The term is agnostic as to whether the manufacturing being brought home occurred in a wholly owned facility in an offshore location or in the factory of an offshore supplier. (②) GE, for example, reshored its appliance manufacturing from its production facility in China to the US in its own plant to meet the US demand, whereas the US-based Vaniman Manufacturing decided to no longer buy sheet metal fabrication from an overseas supplier and to instead source from a local supplier to meet demand in the US. (③) Reshoring is fundamentally concerned with where manufacturing activities are to be performed, independent of who is performing the manufacturing activities in question — a location decision only, as opposed to a decision regarding location and ownership. (④)

Participants in the work-alone condition, who believed they had been excluded, reported lower levels of self-esteem than those involved by the group.

Mark Leary and his colleagues led participants to believe that they were to perform a group task. (①) Before the task, each participant was asked to write an essay about "what it means to be me" and "the kind of person I would most like to be". (②) The experimenter then gave each person's essay to other participants (in another location) who were asked to indicate who they would like to work with in the group setting. (③) The experimenter ignored the participants' actual preferences and randomly assigned some participants to a condition in which they had supposedly been passed over by the others and had to work alone, and other participants to a condition in which they were in high demand by others and worked with a group. (④) Our momentary feelings of self-worth strongly depend on the extent to which others approve of us and include us.

Movies and cartoons sometimes portray scientists as loners in white lab coats, working in isolated labs.

(①) In reality, science is an intensely social activity. Most scientists work in teams, which often include both graduate and undergraduate students. (②) And to succeed in science, it helps to be a good communicator. Research results have no impact until shared with a community of peers through seminars, publications, and websites. (③) And, in fact, research papers aren't published until they are vetted by colleagues in what is called the "peer review" process. (④) Most of the examples of scientific inquiry described in science textbooks for college students, for instance, have all been published in peer-reviewed journals.

The body may then begin to attack itself, as suggested by the rising incidence of autoimmune diseases with advancing age.

The immune system is the body's defense against foreign invaders such as bacterial. (①) The immune system protects and preserves the body's integrity, and it does this by developing antibodies to attack hostile invaders. (②) We know that the immune system begins to decline after adolescence, and the weakening of immune function is linked to age-related vulnerability. (③) According to the autoimmune theory of aging, the system may eventually become defective and no longer distinguish the body's own tissues from foreign tissues. (④)

Even Vincent van Gogh, who was isolated and sold few paintings in his life, cared about the reactions of his brother to the paintings that he produced.

When a painter is working for a patron, as Leonardo da Vinci did for the Medici, there can be emotional communication resulting from the artist’s intention to produce something that the patron will appreciate and enjoy. (①) Some artists often take pains concerning the framing and presentation of their work for the benefit of the viewers of their art, such as when Mark Rothko was highly particular about the lighting of his paintings. (②) So painting is a social process involving the communication of emotional judgments of the artist to the people who view it. (③) Painters cannot expect viewers to appreciate their work with exactly the same perceptions and emotions that went into their Summary creation, but they can hope to generate some approximation of these. (④)

Among the privileges granted to the elite was access to salt, placed in a container on the high table.

Salt was historically so costly and important in Europe that its consumption was linked to social status. (①) In the medieval world, with its rigid hierarchy, the way in which people dined and the food that they ate reflected their position in society. (②) Royalty and nobility sat at the high table, positioned on a dais, while their social inferiors ate at lower tables below them. (③) This clear expression of social divide is reflected in the phrases "above the salt," referring to someone of high rank and "below the salt," which means someone of lower rank or less socially acceptable. (④)

A computer, for example, looks like a big hunk of metal and glass, but if you look closer, moving your way down from the big things to the tiniest parts that make the computer up, you start to see how a computer is really many smaller things combined to make something bigger.

If you stop to think about all of the tiny parts that make up any one thing, you could be thinking about it for quite some time. (①) There are almost an infinite number of things that influence and impact any larger thing, right down to atoms and smaller molecules. (②) A computer isn't just a computer: It's metal, glass and plastic, screws, springs, wires, copper, ink, electricity, and so much more. (③) How those small parts come together to make the bigger parts is what matters, but how often do we take time to think about that fact?. (④)

Even though the part of the brain that controlled the arm was damaged, the CI movement therapy forced the brain to open up new areas in order to move the dead limb.

Taub and his co-workers have already found strong evidence that the brain can be healed by its own plasticity. (①) Amazingly, some people who have lost the use of an arm through a stroke have been trained to use it again by having the good arm restrained and being forced to use the apparently dead one, a technique called 'constraint-induced (CI) movement therapy'. (②) Similar results have been produced with speech impairment and even dyslexia. (③) Although this research is still in its early days, Michael Merzenich of the University of California, San Francisco, believes the brain's plasticity may really enable us to protect ourselves against age decline. (④)

Even if you use proper conversion methods for aspect ratios, squeezing such large images into the small video screen reduces not only image size but also, if not especially, event energy.

When you watch a documentary on a small standard (4x3) video screen and then see it on an equally small wide-screen (16x9) receiver, you probably notice relatively little energy change. (①) When you switch from the small screen to a large HDTV screen, however, the energy change is readily apparent. (②) This is why some movies that emphasize landscape from actual landscapes to spaceships or battle scenes must be seen on the large screen to feel the total impact. (③) Close-ups, inductive sequencing, and a dense audio track help generate some aesthetic energy on the small video screen, but they cannot compete with the large movie images and high-volume surround sound. (④)

In contrast, along straight sections of road carriageway, vegetative cover should extend as close to the road as permitted by road construction and safety standards.

Revegetation techniques are put in place with an understanding of the resultant effects on wildlife. (①) For instance, the planting of tree lines and woodland areas within roadside landscape may naturally force birds to fly higher above roads when crossing between forest edges, as was shown in the Netherlands. (②) Verges should be widened and landscape planting on bends or curves on a road should be set back, to improve visibility and to discourage crossings by wildlife. (③) Landscaping of centre medians, junctions, roundabouts or interchanges should be sensitive to wildlife. (④) Berry-producing plants should not be selected as they may prove attractive yet fatal to wildlife due to the close proximity of traffic. (⑤)

These are relative to sunrise, a precisely definable event.

A diverse garden will become a habitat for a variety of bird species. But if all the birds were to sing at the same time, each one's melody would be drowned out in the cacophony of voices. (①) In order for each singer to be adequately appreciated by his rivals or his sweetheart, each species focuses on a specific time in the morning. (②) Or rather, not a time, but a certain position of the sun. (③) Unfortunately, it changes constantly, as throughout spring, the sunrise takes place a little earlier each day, until the summer solstice on June 21, when it starts getting later again. (④) So, bird song is perhaps not ideal as a genuine replacement for your watch, although each species tends to observe its relative time slot, day by day, with astonishing accuracy. (⑤)

This results in a message that runs more quickly, without changing the pitch of the announcer's voice.

With reference to the variable of intensity, it is almost stating the obvious to say that bright lights or loud sounds can attract our attention. We have all been exposed to countless examples of commercial advertisements that seem to be based solely upon this premise. One unusual example of the use of intensity in advertising contexts is the practice of time-compressed speech in radio commercials. (①) The experiment conducted by LaBarbera and MacLachlan exposed people to five radio commercials that were either normal or time-compressed on the order of 130%. (②) These time-compressed commercials were not "sped up" by making the tape run faster; that would also increase the frequency of the auditory signal, and make the announcer sound like a high-pitched Mickey Mouse. (③) Rather, the time-compression technique involves the shortening of pauses between words, and the reduction of the length of vowel sounds. (④) These researchers found that the time-compressed advertisements elicited more interest and better recall than the normal ads. (⑤)

However, recycling has certain limitations when applied to radioactive materials.

Recycling means recovery and reprocessing of waste materials for use in new products. (①) Recycled waste can be substituted for raw materials, reducing the quantities of wastes for disposal as well as potential pollution of air, water and land resulting from mineral extraction and waste disposal. (②) Due to their inherent radiation, radionuclides are much more difficult to recover from contaminated materials. (③) Recovery usually presumes concentration of species into a smaller volume even though this may result in more dangerous materials. (④) Waste radionuclides recovered from contaminated materials are difficult to recycle in new devices or compounds. (⑤) Hence, even materials that contain large amounts of radioactive constituents (e.g, sealed radioactive sources as used in industry, medicine and research) often are immobilized (conditioned) and safely stored and disposed of rather than recycled.

As a result, birds often try to fly through windows.

Glass affords transparency. At the same time, its physical structure blocks the passage of most physical objects. As a result, glass affords seeing through, but not the passage of air or most physical objects (atomic particles can pass through glass). The blockage of passage can be considered an anti-affordance — the prevention of interaction. To be effective, affordances and anti-affordances have to be discoverable — perceivable. (①) This poses a difficulty with glass. (②) The reason we like glass is its relative invisibility, but this aspect, so useful in the normal window, also hides its anti-affordance property of blocking passage. (③) And every year, numerous people injure themselves when they walk (or run) through closed glass doors or large picture windows. (④) If an affordance or anti-affordance cannot be perceived, some means of signaling its presence is required. (⑤)

Other aspects of the ritual may communicate even more.

In cultural contexts that require polite formulas rather than honest words, language may lose almost all its communicative function, and here food often takes over the role. In formal dinners around the world, it is not usually appropriate to send the important social messages verbally. (①) Words are bland and carefully chosen. (②) More information about the actual social transactions going on at the dinner is transmitted by food choice and distribution. (③) The most valued guest often gets the choicest portion, and so on down. (④) Everyone carefully observes who sits next to the host, who sits at the host's table, who is the first one to be greeted, who is served first, who gets the best piece of meat, or who is urged to have seconds. (⑤)

The pigeons appeared to have concluded that their little routines were causing the release of the food even though in reality there was no relationship whatsoever.

Ritualistic behaviour designed to influence future events is not, it seems, limited to humans. (①) B, F, Skinner's classic research into 'superstition in the pigeon', conducted at Indiana University in 1948, supports this hypothesis. (②) Skinner described an experiment in which pigeons were placed inside a box and were presented with a small piece of food once every fifteen seconds, regardless of their behaviour. (③) After a few minutes the birds developed various little unusual rituals, such as walking round in circles, moving their heads up and down and so on. (④) Skinner's explanation for this phenomenon was that the accidental pairing of the release of food early on in the process with whatever the bird happened to be doing was enough to reinforce that particular type of activity. (⑤)

In contrast, when we say that two substances are identical or the same, there is no notion of wholeness.

Within the domain of concrete entities, objects and substances have very different properties. Objects are individuated, whereas substances are nonindividuated. (①) Thus, the two kinds of entities have fundamentally different criteria for the notion of identity or sameness. (②) When we say that two objects are identical or the same, we are referring to two objects in their entirety and not to two distinctive parts of a single object. (③) Substances are of scattered existence, and there is no such thing as whole sand, whole water, or whole clay. (④) This portion of sand is identical to that portion of sand, as long as the two portions consist of the same physical constituents. (⑤) This difference in identity or sameness between objects and substances leads to fundamentally different extension principles for determining category membership across the two ontological kinds.

Yet, for some endangered languages, the tide is changing through the digital revolution.

Although the efforts to revive dying languages are admirable, the challenges facing those who would reverse the extinction process are intimidating. Not all of the extinctions are the direct result of hostility and repression from a dominant government, as was the case with American Indians throughout most of US history. (①) But where brutal repression failed to make indigenous languages and culture extinct, intense globalization since the 1980s has been more successful. (②) The recent revolution in communications technology has provided powerful tools (through the airwaves and cyberspace) for the spread of mainstream Western culture and language. (③) As Rosenberg points out, digital technology, discussion groups, software companies, and apps are lifelines for language preservation for minority and endangered language communication needs. (④) At one time technology forced some language speakers to adopt the dominant language of their community or nation. (⑤) Now, new tools create the possibility for revitalizing languages and retaining language speakers of endangered languages.

In addition, Gardner, Pickett, and Brewer found that individuals who experience social rejection are more likely to remember socially relevant information that is consistent with one's motive.

(①) Several studies have shown that individuals who are ostracized, excluded, or rejected by others behave in ways that will increase their chances of eventually becoming accepted. (②) These behaviors range from working harder in group settings, to conforming to group perceptions, or being more sensitive to information about others. (③) For example, Williams and Sommer found that women responded to ostracism by increasing their efforts on a subsequent group task. Similarly, Williams, Cheung, and Choi observed that ostracized individuals were more likely than others to conform to the opinions of other people. (④) Thus, these studies show that in response to social rejection, people seek to reconnect themselves found with their social worlds. (⑤)

But the technological onslaught of today's world can also become highly stressful.

David Rock, author of *Your Brain at Work*, has described in fascinating detail the intricate mechanics of the brain on creativity and stress. We know, for example, that self-described happy people have more new ideas. (①) We now know that stress decreases our cognitive resources, whereas mindfulness induces what is called a toward state in the brain, an openness to possibilities. (②) In this condition, we feel curious, open-minded, and interested in what we are doing — all excellent qualities for thriving on the job. (③) Neuroscience tells us that creativity and engagement are essential to making people happier. (④) Long hours, hard work, and high pressure are made worse by our being permanently plugged in. (⑤) Though the introduction of laptop computers, high-speed Internet, mobile technology, and social media have wonderful advantages in how we connect, they also reinforce behaviors that shut down the toward state and set us on autopilot.

So instead, the tadpole-like swimming larvae of the sea squirts do not settle down immediately.

For sea squirts, a two-part life cycle provides a quite obvious advantage. Adult sea squirts live very nicely, attached to the sea bottom. (①) All the food they need comes drifting to them in the ocean currents, and they never have to move. (②) They have even solved the problem of getting together to mate by shooting their sperms and eggs out into the water. (③) But then, if the young sea squirts immediately settled down to the bottom, the sea squirt colony would soon be so crowded that they would have to grow on top of each other. There would not be enough food to feed the huge crowds of sea squirts, all jammed into a small area. (④) They swim and drift with the ocean currents. (⑤) By the time they are ready to change to adults and take up a place on the ocean bottom, they have been scattered over a wide area.

This pain often makes it impossible for the diver to straighten up, which is why this condition is aptly named the bends.

Divers working at high pressures underwater usually breathe "air" that is a mixture of oxygen and helium. Helium is substituted for nitrogen in this mixture because it is less soluble than nitrogen and therefore less likely to dissolve in the bloodstream. (①) This offers better protection against one of the major hazards of diving, called the "bends". (②) If a diver returns to the surface too quickly after a dive, the relatively lower pressure at the surface than deep underwater causes dissolved gases to bubble out of solution in the blood. (③) The effect is similar to the frothing in a bottle of soda water when the cap is removed. (④) In human bodies, the gas bubbles released in this way often get trapped in the joints, causing extreme pain for the diver. (⑤)

It must be admitted, however, that the land lost probably was good cliffland on the open coast which disappeared in a spectacular way, whereas the land gained was low, sandy and not particularly valuable.

In England in the early 1900s property owners whose land was being eroded by wave action clamored for the Government to take preventive action. Their island was disappearing beneath the sea!. (①) They argued so loudly that a Royal Commission was appointed to study the matter. (②) After making a careful survey, the commission reported that over a period of thirty-five years England and Wales lost 4,692 acres and gained 35,444 acres, giving a net gain of nearly nine hundred acres a year. (③) This finding seemed to prove that people whose land disappeared complained more loudly than those whose land was increasing. (④) Non-geologists are usually not aware that the very existence of a cliff is warning that erosional processes are at work, even though the changes seem to be very slow. (⑤)

Therefore, an audience can never be sure exactly what the artist had in mind.

Subjectivity is an integral part of all art, and sometimes, even where it seems the least likely, one finds a comprehensive communication between the artist and the audience very difficult. For example, not just in abstract painting, but in the most straightforward painting. (①) Just take one of the best-known paintings, the Mona Lisa, painted by Leonardo da Vinci. (②) No one mistakes that this painting is the portrait of a woman; that much we know. (③) However, the intriguing smile in this painting is interpreted in so many different ways, in terms of what state of the mind this smile depicts. (④) This holds true on all levels, and thus, perfect communication cannot occur between most artists and their audiences through their art alone. (⑤)

To simulate browsing by roe deer, the researchers cut off buds or leaves and dripped roe deer saliva onto the damaged areas.

Recent research has shown that trees are not as passive as we long supposed. (①) To investigate this further, European scientists simulated attacks on small beeches and maples. (②) Whenever a roe deer takes a bite out of the top growth of a young tree, it leaves a little saliva behind in the wound, and it soon became clear that wounded trees can clearly detect the presence of this saliva. (③) What they noticed was that in response the little trees produced salicylic acid, which in turn led to an increased production of bad-tasting defensive compounds, which discouraged the roe deer from eating them. (④) However, when the scientists simply broke off new growth without applying any saliva, all the beeches and maples produced were hormones to heal the damage as quickly as possible. (⑤)

But the definition of "earlier community" is different in each case.

Historical linguists study the languages spoken today, and from them make estimates about the ancestral languages from which they descended. (①) Where possible, linguists also work from written records on languages in earlier times. (②) For linguistics as for genetics, we assume that present data give us the remnants of earlier communities. (③) For language, it is assumed that each language has one parent. In genetics a person has more and more ancestors as one goes to earlier generations, while a language has a single ancestor at each stage. (④) The "tree model" of languages presents the range of languages descended from an ancestor, and indicates relationships with other languages descended from the same ancestor. (⑤) Because of the single-ancestor characteristics of the linguistic "tree model", language gives more evidence on path of early human migration than does genetics, because it allows for fewer possibilities.

Such situations have led to innumerable conflicts in scientific circles.

Because scientific research is so often conducted in the interests of national defense or under the sponsorship of private firms that hope to profit from applications of the findings, the norms of common ownership and publication are often suspended. (①) An outstanding example is the race to publish the complete map and inventory of the human genome — all the sequences of human DNA that constitute our genes. (②) In 2001, two rival groups raced to be the first to complete the research, one in the private sector, the Celera Genomics Corporation, led by J, Craig Venter, and the other a government-funded laboratory headed by Francis Collins. (③) An argument raged over whether the private corporation was trying to establish patents on human genetic sequences, a violation of the norm of openness. (④) The public laboratory had, or claimed to have, no such business interest. (⑤) Eventually the competing teams compromised and issued a joint publication of the map, but the controversy and legal battles over issuing patents for genetic material have continued.

And if you can reduce complex inputs to simple chunks, you'll find you can think about them much more clearly and effectively.

Looking for patterns works because our memories are organized in terms of what psychologists call 'schema'.

(①) A schema is a familiar pattern of relationships stored in your memory. That way they form memories so strongly linked that they are recalled more or less as a single unit. (②) This is so powerful that it doesn't just influence your way of remembering lists, it actually affects your entire way of thinking. In one experiment, chess grandmasters and masters were tested against ordinary chess players to see how accurately they could remember the position of 20 to 25 chess pieces placed randomly on a board after glancing at the board for 5 to 10 seconds. The masters and ordinary players were pretty similar in being able to remember the places of only 6 pieces. (③) Yet if the pieces were arranged in the form of a game(unknown to anyone), the grandmasters and masters could suddenly remember all the positions, while the ordinary players could still manage only 6. It was clear that this was not simply a memory feat — it was due to the grandmasters' and masters' ability to see the positions as a single chunk or schema. It is clear that the more you develop schema, or patterns, the better you'll remember things. (④) As a general rule, if you ever find yourself forgetting anything, it is not because your brain is declining or your memory is receding. (⑤) It's simply because you are not using the correct memory technique to help you store and retrieve the information.

And yet, while we are born with a strong drive to seek novelty, this drive fades over time.

Novelty compels both humans and animals to engage with the unfamiliar. Indeed, our strong desire for novelty has evolutionary roots, improving our survival odds by keeping us alert to both friends and threats in our environment. (①) As new parents quickly learn, when given a choice, babies consistently look at, listen to, and play with unfamiliar things. One of my favorite moments from early parenthood was when I watched my infant son notice his hands for the first time. His discovery stands out as a metaphor for learning: His interest in what those strange, wonderful appendages could do was his first step toward controlling them. (②) The preference for novelty is an efficient way for immature cognitive systems to process information, helping babies cope with changes to their environment before releasing their inner explorer. Interestingly, in human genetics, a preference for novelty has been linked to the migration of early humans to the far reaches of the earth. (③) Recent studies have shown that human groups that migrated the farthest from Africa had more of the genes linked to novelty seeking. That is, the people who traveled the farthest from home may have had some biological propensity to experience mysterious new places. (④) As we grow older, other desires take over, like wanting more predictability. (⑤) The organizations we build and join reflect this reality: paychecks at the same time each week or month, evaluations according to established processes, jobs that involve a known set of activities.

There comes a time in the life of any organism or organization, when it has to try something completely different.

You've no doubt heard the old saying: "when the going gets tough, the tough go shopping!". That is precisely what bacteria do when they find themselves in deep trouble. They go shopping for useful genes that can help to get them out of the mess. (①) In a sporting team, it has been called throwing away the game plan, and this is exactly what hypermutation involves. (②) When a bacterial colony is in a critical situation — when survival is on the line — something very strange happens — the bacteria suddenly start mutating at an extraordinarily rapid rate. (③) In so doing, they are consulting the microbial lending library, hoping that they can come up with a mutation that might get them out of their crisis. Starving E. coli colonies (hyper-)mutate at a rate one thousand times greater than that which would normally be the case in a well-fed colony. (④) You can even find certain hypermutators within a normal or well-fed colony, sitting there, ready to spring into a hypermutational mode at the first sign of serious stress. (⑤) As Frank T. Vertosick so humorously put it: "these hypermutators are the Van Goghs of the microbial worlds — somewhat insane, but infinitely creative".

In our society, for example, there are courts of law and means of judging criminals which are so complex that only specialists can understand them.

Social sanctions vary in degree of formalization. (①) In most stable associations there are highly formal procedures, such as ceremonies for honoring those whose services are believed to have contributed to the well-being of the membership and for the discredit or exclusion of those whose activities have been considered harmful. (②) Some sociologists attach great importance to such highly formalized sanctions and have even defined the organized group as one in which the social structure is protected and reinforced through formal sanctions. (③) Such norms are without doubt controls on deviant behavior, but for most people the less formal sanctions, the spontaneous displays of approval or disapproval, prove more effective. (④) Those who are about to violate some rule are often stopped short by the show of displeasure on the part of others. Ridicule and gossip are especially effective. In some cases deviant parties may be excluded informally, even when they continue to retain membership in the group. Among the most effective of the informal sanctions is the deprivation of mutual services, the refusal of others to honor the claims of the violator's role. (⑤) Since roles consist of reciprocating claims and obligations, they cannot be maintained without the cooperation of others in complementary roles. When a person speaks to a colleague, he ordinarily has a minimal claim upon him to respond in some way. Others may, however, refuse to live up to their obligation to be polite as a way of indicating their disapproval.

But he was not heavy enough to keep the tree on the Earth. Instead, he was carried with it into the sky.

Cuoi was born to a poor family and he had to work at various jobs to provide for his family. One day, while gathering wood in the forest far from home, Cuoi came upon a tiger cub and picked it up. (①) Then, he heard a frightful growl. It was the mother tiger. Cuoi threw the cub to the ground and scrambled in terror up into the branches of the nearest tree. A moment later the tigress came rashing through the underbrush and growled as she saw the body of her dead offspring. Cuoi, in his haste to escape, had thrown the cub to the ground with such force it had been killed. Then, a strange thing happened. (②) The tigress walked to a nearby stream and gathered the leaves from a banyan tree. She chewed them into a pulp which she then applied to the head of the dead cub. Immediately the young tiger jumped to its feet and ran about as if nothing had happened. When the tigress and her cub had disappeared, Cuoi went to the miraculous banyan tree and gathered a handful of its leaves. On the way home he came upon a dead dog lying by the side of the road. (③) Cuoi then chewed the leaves into a pulp and applied it to the dog's head. After a few minutes the animal was restored to life; it jumped to its feet. Cuoi went back to the banyan tree, uprooted it, and replanted it in his yard. He warned his mother never to dump dirty water where the tree was planted. "Otherwise" he said jokingly, "it will fly away into the sky". Cuoi's mother paid no attention to this warning and continued to dump dirty water near the tree. (④) One day the tree began to slowly pull itself from the soil and to fly up into the sky. Returning from his chores, Cuoi noticed this and grasped its roots to keep it from flying away. (⑤) After many years, Cuoi and the tree reached a strange new world — the Moon. Cuoi planted the tree there and sat down to figure out a way out of his predicament; but there was no solution. There on the Moon he has sat waiting, year in and year out, even until today.

And after his winning the Rookie of the Year Award in 1947, fans became aware of the prayer-born patience that made him one of the great men of the game.

The older man, a prominent baseball figure named Branch Rickey, suddenly changed his matter-of-fact, businesslike expression and turned on the young African-American athlete. "You're just a black man". he shouted, "so you'll never succeed in the big leagues!". The young man, stiff with hurt and surprise, clenched and unclenched his fists threateningly, but the older man moved closer and kicked him with hostility. Then it was over. The older man- the baseball-team owner- stepped back, and the two men studied each other silently. The younger man spoke "Why do you have to say these things to me, Mr, Rickey?". (①) Branch Rickey, owner of the Brooklyn Dodgers and respected figure in baseball, dropped the false pose he had taken, smiled, and gently touched the young man's shoulder. Moments earlier they had been discussing the possibility of a career in big-time baseball for the young African-American man, Jackie Robinson. (②) The year was 1945, and African Americans were barred from the major leagues. Rickey had warned Robinson that he would need two things to succeed. These were the ability to play baseball with the best, and the ability to stand the massive resentment toward the first African-American player in major-league baseball. (③) In testing Jackie's patience in the latter, Rickey had tried to demonstrate, through pretended anger, the hate Robinson would meet. "Do you think," said Rickey, referring to his dramatic and realistic portrayal of a racist, "that you can get through this kind of thing?". "I can," replied Robinson softly, "if I pray," Rickey's prediction of trouble ahead could not have been more accurate. There were boos in the stadium, constant insults, and opposing players using steel spikes to hurt him. Teammates refused even to give him the traditional handshake and cheer when crossing the plate after a home run. But Jackie endured. (④) No one should have to qualify for sainthood in order to play baseball, but he humbled himself. (⑤) Both he and Rickey were later honored by being elected into baseball's Hall of Fame.

He got up to investigate and, saw the old burglar standing next to the donation box.

The abbot woke up early one morning. Nothing was unusual in that. But this morning he was awakened by the sound of something moving in the nearby shrine room. That was unusual because most of his monks would normally be practicing their morning “chanting” so he went to investigate. (①) In the darkness he saw a silhouette of a hooded figure. It was a burglar. After a few moments of silence the abbot said kindly, “what do you want, my friend?”. “Give me the key to the donation box,” said the burglar. (②) The abbot saw a weapon in his hand but felt no fear. He felt only compassion for the young man. “Certainly,” he said, slowly handing over the key. As the thief hurriedly emptied the box of cash, the abbot noticed the robber’s jacket was torn, his face pale and gaunt. “When was the last time you have eaten, dear boy?” asked the abbot. “Shut up!” barked the burglar. (③) The abbot nicely responded, “You’ll find some food in the cupboard next to the donation box. (④) Help yourself”. The thief paused a moment in confusion. He was taken aback by the abbot’s consideration for his welfare. Still, he hurriedly filled his pockets with cash from the donation box and food from the cupboard. “And don’t call the cops” he shouted. “Why should I call the police?” answered the abbot calmly. “Those donations are to help poor people like you, and I have freely given you the food. You have stolen nothing”. A few days later, the abbot read that the burglar had been caught robbing another house. He was sentenced to ten years in jail. Just over ten years later, the same abbot awoke to the sound of someone in the shrine room. (⑤) “Remember me?” shouted the burglar. “Yes” sighed the abbot. “Here’s the key”. Then the burglar smiled, and said gently. “Sir, put away the key. I couldn’t stop thinking about you all those long days in prison. You were the only person in my entire life who was kind to me, who actually cared about me. I have come back to steal again, but this time I have come to take your secret of kindness and inner peace. Please, make me your disciple”.

Indeed, animals may have no concept of “disability” in the way humans do.

It is something of a common idea among animal behaviorists that wild animals do not tolerate disabilities, and that animals who are unfortunate enough to be born with a physical disability or fall ill rarely last very long. (①) I am doubtful. Recent research on many species has shown that young animals born with serious disabilities are nevertheless able to live with the help of their mothers and sometimes other friends and relatives. This is particularly true of elephants but applies to many species. (②) Inspiring in this instance is the account Kim Sturla gave of Helen, a completely tame hen who was found wandering the streets of San Francisco. She was totally blind, and dogs were attacking her when a homeless person took pity on the hen and rescued her. (③) She was taken to the city’s animal shelter, where a call was put through to Animal Place to see if they would be willing to give her a home. Helen was born with a condition called cryptophthalmos, meaning that her eyelids had never formed properly and therefore never opened. One foot was missing and one of her legs was several inches shorter than the other. (④) Concerned on the first night that Helen might become the object of contempt from the other hens and roosters, Sturla set up a special nest in the barn. (⑤) But when she opened up the door the following morning, a triumphant Helen greeted her sitting proudly on the top perch. Blind and lame, she had somehow found this spot. Far from feeling contempt for Helen’s disabilities, the other birds stood in a kind of admiration for her, and she lives to this day in complete harmony with the rest of the flock, grooming her feathers, enjoying the sun, and dust-bathing with pure delight.
